

COVID-19 WEEKLY UPDATE

Time Period Covered: January 10 to 16, 2021

This weekly update is intended to show data compiled over a week's time and confirmed data over the life of the COVID-19 pandemic. As data is verified, total numbers reported previous weeks may change in future weeks as data is confirmed.

Reporting weeks run from Sunday through Saturday. This weekly report will be based on each week ending the previous Saturday, the last full week that complete data is available for each report.

Weekly Update Data Sources

- Laboratory and key goals test data are from:
 - Washington State Department of Health COVID-19 Data Dashboard.
<https://www.doh.wa.gov/Emergencies/NovelCoronavirusOutbreak2020COVID19/DataDashboard>
 - Washington COVID-19 Risk Assessment Dashboard
<https://coronavirus.wa.gov/what-you-need-know/covid-19-risk-assessment-dashboard#road-to-recovery>
- Diagnosed (Confirmed) with COVID-19 Cases, Locations, Ages, Hospitalizations, and Deaths data are from the Lewis County Public Health & Social Services Department.

We access data from multiple official sources. Each source uses its own definitions, processes and deadlines in order to meet its own organizational needs. What can appear to be discrepancies in data from one source to another, or one day to another, is just a reflection of these operating procedures.

Everything we report our Weekly Update, Daily Case Information Report, on our website, or in our news releases is an official public record. As such, it has been confirmed to the best of our abilities to be accurate for Lewis County before being published.

Summary

A person is diagnosed with COVID-19 when their PCR test for the illness returns positive. The first diagnosed (confirmed) case of COVID-19 in a Lewis County resident was reported on March 15, 2020.

Cases as of 1/16/2021

Description	1/10/21 – 1/16/21	Total 3/15/20 – 1/16/21
Diagnosed with COVID-19 (confirmed/positive test) <i>Numbers based on the date the positive test was reported to LCPHSS</i>	177	2,600
Hospitalized for COVID-19 related reasons (ever during illness)		137
Deaths		31

Persons who have **Recovered** or who are **Lost to Follow-up** cannot be tracked by our limited staff at this time due to the high volume of new cases being reported every day. Investigating new cases and serving those who are at the beginning of their COVID-19 disease process must take priority. We hope to resume tracking residents who have recovered or are lost to follow-up as soon as possible.

Cases for current week have not been de-duplicated yet and numbers are not final

Description	1/17/2021-- 1/19/2021	Total 3/15/2020 -- 1/19/2021
COVID-19 cases reported	38	2,638

West Region Performance Metrics

As part of Governor Inslee's *Roadmap to Recovery* initiative, Washington State was regionalized into eight (8) regions. Lewis County is part of the West Region, along with Grays Harbor, Thurston, and Pacific counties. A region's phase will be determined by the Department of Health (DOH) in response to four metric requirements. The final metrics for regions were calculated on Friday, January 8 and will be effective January 11. This is the first week for the new metrics, and all regions will begin in Phase 1. To go forward from Phase 1 to Phase 2, regions must meet all four metrics:

- **Decreasing trend in two-week rate of COVID-19 cases** per 100K population (decrease >10%)
- **Decreasing trend in two-week rate new COVID-19 hospital admission rates** per 100K population (decrease >10%)
- **ICU occupancy** (total — COVID-19 and non-COVID-19) **of less than 90%**

- **COVID-19 test positivity rate of <10%**

To remain in Phase 2, regions must meet at least 3 metrics:

- **Decreasing or flat trend in two-week rate of COVID-19 cases** per 100K population
- **Decreasing or flat trend in two-week rate new COVID-19 hospital admission** rates per 100K population
- **ICU occupancy** (total — COVID-19 and non-COVID-19) **of less than 90%**
- **COVID-19 test positivity rate of <10%.**

Regions that fail to meet two or more of the above metrics will be moved back to Phase 1.

The four metrics provide an overview of current COVID-19 trends and healthcare system readiness in each region. The four metrics are:

- 1) Trend in 14-day rate of new COVID-19 cases per 100K population;
- 2) Trend in 14-day rate of new COVID-19 hospital admissions per 100K population;
- 3) Average 7-day percent occupancy of ICU staffed beds; and
- 4) 7-day percent positive of COVID-19 tests.

The data and the date ranges reported below come directly from the Washington State Department of Health.

Region	Percent of adult staffed beds occupied	Percent of adult staffed beds occupied - GOAL	Staffed beds occupied by adults with suspected and confirmed COVID-19	Staffed beds occupied by adults with suspected and confirmed COVID-19 - Goal	Percent adult ICU staffed beds occupied	Percent of adult ICU staffed beds occupied by COVID-19 cases
West	90.70%	No	16.10%	No	87.10%	20.00%

As of 1/15/2021. First week of metrics being reported; no comparison data yet.

Location and Age Data

Reported cases of COVID-19 through 1/16/20201 by ZIP code area

Zip Code Areas	Zip Codes	Cases
Centralia (includes Galvin and Rochester)	98531, 98544, 98579	1,065
Chehalis (includes Adna)	98532, 98522	801
Cinebar	98533	15
Curtis	98538	18
Doty	98539	15
Ethel	98539	23
Morton	98356	26
Mossyrock	98564	69
Napavine	98565	47
Onalaska	98570	100
Packwood	98361	18
Pe Ell	98572	26
Randle	98377	21
Salkum	98582	20
Silver Creek	98585	19
Toledo	98591	103
Vader	98593	24
Winlock	98596	172
Eastern Group (Glenoma, Mineral)	98336, 98355	16
Not yet assigned		2
Total		2,600

Congregate Care Center Outbreaks

Congregate care centers include licensed facilities, such as nursing homes, assisted living, adult family homes, child care centers, schools, homeless shelters, jail, detention and other similar group care or placement settings. An outbreak involves two or more linked cases of COVID-19. The number of outbreaks reported does not equal the number of persons involved.

- As of January 16, 2021, there were active outbreaks under investigation in 6 congregate care settings in Lewis County.
- To date, 25 total congregate care setting outbreaks have occurred in Lewis County, accounting for 336 COVID-19 cases.

Total Cases and Deaths by Age Group

This information is presented and updated daily at <https://phsscovid19.lewiscountywa.gov/>.

Age Group	Cases	% by Age	Deaths*	*LCPHSS doesn't report COVID-19 deaths of Lewis County residents until confirmed by receipt of a physician-signed death certificate that states COVID-19 as the cause of death.
Under 20	403	15.50%		
20-29	464	17.85%		
30-39	414	15.92%		
40-49	409	15.73%	1	
50-59	332	12.77%	1	
60-69	282	10.85%	1	
70-79	172	6.62%	10	
80+	<u>124</u>	4.77%	<u>18</u>	
TOTALS	2,600		31	

Weekly Case Numbers

The highest number of Lewis County cases in a single week occurred December 6-12, 2020, when 262 residents were diagnosed with COVID-19.

Reporting Week (Sunday - Saturday)	Total Diagnosed in Week	Running Total (cumulative)
First case identified March 15, 2020		
Dec. 20-26, 2020	172	2025
Dec. 27, 2020 to Jan. 2, 2021	179	2204
January 3-9, 2021	219	2423
January 10-16, 2021	177	2600

Definitions

- **Deaths:** A person diagnosed with COVID-19 who dies due to health complications related to the illness is counted as a COVID-19 death. A person with other life-limiting illness(es) who dies will only be counted as a COVID-19 death if the viral illness was the primary cause of death.
- **Diagnosed with COVID-19 (confirmed):** a person has had a laboratory (viral) test for COVID-19 and the test was positive.
- **Hospitalized:** A person is counted as hospitalized if they were an inpatient for COVID-19 related reasons at any time during their illness.
- **Isolation:** Persons diagnosed with COVID-19 separate themselves from other people to prevent the possible spread of COVID-19. Isolation can last 14 or more days until the person is no longer considered infectious.
- **Laboratory Testing for COVID-19:**
 - The **PCR viral test** detects genetic material of the virus to determine if persons being tested have active virus in their bodies. A positive test is a diagnosis of COVID-19 infection. This is considered the most accurate test in use.
 - An **antigen test** detects certain proteins in the virus. It is faster and less expensive than a PCR viral test. However, due to its increased chance of false-negative results, it is not considered to be as accurate as the PCR viral test.
 - An **antibody test** determines if antibodies against COVID-19 are present in the tested person's blood. A positive test is an indication that that person may have been exposed to COVID-19 at some time, but is not a diagnosis of active COVID-19 infection.
- **Lost to Follow-up:** LCPHSS reaches out to patients 28 days after their diagnosis and makes at least 3 attempts to contact them. People we cannot reach, but when we know have not died, are classified as lost to follow-up, but not forgotten. This number can change over time as patients call back, are eventually contacted through additional tries, or die.
- **Outbreak:** An outbreak involves one or more linked cases of COVID-19. The number of outbreaks reported does not equal the number of persons involved.

- **Quarantine:** Persons who were in close contact with another person who was diagnosed with COVID-19 separate themselves from other people to prevent the possible spread of COVID-19. Quarantine can last 14 or more days until the person is no longer considered potentially infectious.
- **Recovered:** A person who is alive and not hospitalized 28 days after symptoms began. This does not necessarily mean the person has returned to full wellness. A person listed as Recovered at the 28-day mark may still be sick from COVID-19.
- **Resident:** A person who lives within the geographic boundaries of Lewis County.
- **Viral load:** the amount of virus in an infected person's blood. It is written as the number of viral particles in each milliliter of blood. Generally, the higher a viral load is, the more the disease is progressing and the more likely a person is to spread the virus to others.
